

Playwright E2E Test Report

Date: 2026-08-04 Branch: master Commit: 03c7e8f Tests: 152

1. Summary

Metric	Before (a641673)	After (03c7e8f)	Delta
Passed	116	138	+22
Failed	23	0	-23
Flaky	1	1	0
Skipped	12	13	+1

Before: 23 failures: UI-redesign selector mismatches + login-page load timeout

After: All 23 previously failing tests now pass or are intentionally skipped

2. Tests Fixed This Session

13 fixes across 5 files. 22 previously failing tests now pass; 1 intentionally skipped (feature removed in redesign).

[fixtures/api-mock.ts] setAuthToken -- affects all specs

page.goto default 'load' event timed out (60s) on OAuth SDKs. Changed to waitUntil:'domcontentloaded' -- only localStorage access needed.

[growth.spec.ts] dismissing nudge POSTs dismiss endpoint

aria-label mismatch: button renders aria-label='Dismiss', not 'Dismiss recommendation'. Updated getByRole selector.

[growth.spec.ts] Referrals tab (5 tests: code, share URL, leaderboard, redeem, 409)

ReferralCenter only renders when tab==='referrals'. Wrapped in nested describe with beforeEach that clicks Referrals tab and awaits heading.

[sessions.spec.ts] beforeEach gate -- blocked all 8 tests

'Sign-in & Security' is a p element, not a heading. Changed getByRole('heading') to getByText(/Sign-in.*Security/i).

[sessions.spec.ts] page navigation -- all 8 tests

page.goto('/settings') default 'load' hangs on external scripts. Changed to waitUntil:'domcontentloaded'.

[wallet.spec.ts] page navigation -- all 11 tests

page.goto('/wallet') default 'load' caused 60s timeout. Changed to waitUntil:'domcontentloaded'.

[wallet.spec.ts] renders bucket breakdown chips

FinancialHero has no bucket chip elements. Replaced with balance '1,240' and 'Spent this month' stat strip label check.

[wallet.spec.ts] NONE budget shows 'No budget set'

Text doesn't exist. NONE state shows a 'Set budget' dashed button. Changed to getByRole('button', { name: 'Set budget' }).

[wallet.spec.ts] editing budget / after saving budget

'Edit' button doesn't exist -- renamed 'Set budget'. Progress check /% used/ wrong case; fixed to /spent/i + 'of monthly budget'.

[wallet.spec.ts] transaction table entryType badges

Raw DB values used (TRIAL, PURCHASE, USAGE DEBIT). Component maps via TYPE_LABELS: Trial credits / Top-up / AI usage.

[wallet.spec.ts] expiry timeline

getByRole('heading') failed -- 'Credit Expiry' is a span. Changed to getByText. BUCKET_LABELS: promotionalCredits maps to 'promo credits' not 'promotional credits'.

[wallet.spec.ts] marketplace packs + PROVIDER failure

'Buy Credits' heading gone; changed to 'Top Up Credits' (exact:true). Pack text is 'Starter - 1,000 cr'. PROVIDER test fills custom amount first.

[orgs.spec.ts] copilot panel sends selected orgId

Copilot redesign removed 'Open Copilot' button and 'Bill to' picker. Changed to test.skip.

3. Commits on master

Type	SHA	Description
fix(e2e)	03c7e8f	Repair growth, sessions, wallet, orgs -- 23 failing tests fixed. setAuthToken waitUntil fix; tab-navigation pattern for referrals; selector updates (TYPE_LABELS, BUCKET_LABELS, span vs heading, Set budget, Top Up Credits, pack button names, /spent/i).
fix(e2e)	a641673	library.spec.ts 7/8 to 8/8: subscriberCount fixture, /projects?tab=channels navigation, strict-mode .first() / exact:true, API intercept pattern. autonomy.spec.ts: LIFO route ordering, localStorage key, hydration gate.
fix(e2e)	1769856	autonomy.spec.ts: restore waitUntil:networkidle for 6 interactive-action tests. api-mock.ts: added publishing/wallet/channel fixture fields; regex anchor fixes.
fix(a11y)	8ef0fbd	text-gray-400 to text-gray-600 (3.7:1 to 5.9:1 contrast) across 17 pages; aria-label on user-menu; role=img on star ratings.
feat(media)	3d7595b	GET /system/media-providers probes all adapter availability; Kling v2 API rewrite; A1111/ComfyUI/Runway adapter guards.

All commits pushed to master -> GitHub -> Vercel (auto-deploy on push).

4. Still Failing / Flaky

After this session, 0 tests fail in isolated per-spec runs. One pre-existing flaky test remains (passes on retry).

Location	Test Name	Status
navigation.spec.ts:80	root path / shows landing page	Flaky (pre-existing). SSR/hydration timing on first visit. Passes on retry.

5. Outstanding Items

HIGH	Full-suite cascade risk	All 23 failures confirmed fixed in isolated per-spec runs. A full 152-test sequential run can still hit dev-server memory pressure after 90+ min. Fix: --workers=4 or add server restart between suites in CI.
HIGH	navigation.spec.ts:80 flaky	Root path / fails on first attempt, passes on retry. Add waitForSelector hydration gate (same pattern as autonomy scheduler fix).
MED	CI Playwright workflow	No GitHub Actions workflow runs the E2E suite. Add .github/workflows/e2e.yml that builds Next.js, starts the server, and runs npx playwright test.
MED	Vercel deploy verification	Commit 03c7e8f pushed to master. Verify Vercel auto-deploy completed.
LOW	orgs.spec.ts copilot billing test	test.skip added because feature was removed in redesign. Replace with a test that covers the current billing UI.
